EDUCATION

University of California San Diego, California **December 2026**
M.S. Business Analytics (Rady Incoming Scholarship Award Recipient)
Coursework – SQL and ETL, Customer Analytics, Managerial Judgement, Python Programming, Business Analytics
Manipal University Jaipur, India **July 2022**
Bachelor of Technology in Computer and Communication Engineering

SKILLS

Technical Skills: SQL, Python, Machine Leaning, Natural Language Processing, Generative AI Model development, Excel, JIRA
Industry Software: Alteryx, Infomatica, Snowflake, Tableau, PowerBI, Looker, Grafana, PowerQuery, Apache Spark,Kafka,Datastage,VBA
Industry Skills: Design Thinking, Agile Methodology, Financial Analytics, Prompt Engineering, Workflow Development, Product Design

PROFESSIONAL EXPERIENCE

Bank of America, Gurugram, India **August 2022 – April 2025**
Data Analyst (Enterprise Data Analytics and Performance Services)

- Implemented sentiment-aware fault prediction using VADER (rule-based polarity) + BERT embeddings for ticket text, boosting prediction accuracy by 9% and enabling proactive alerting using Geneos that lowering response time by 20% .
- Leveraged Alteryx and the Alteryx Intelligence Suite to automate data preparation, cleansing, and predictive modeling workflows, integrating Python scripts and SQL queries to streamline analytics across multiple data sources, saving 3+ hours daily for 7 departments and 250+ employees.
- Implemented Informatica's cloud-native AI-powered ETL pipelines and Google Cloud (GCP) solutions to modernize data infrastructure for internal clients to identify key KPI's, reducing data latency by 60% and enabling near real-time reporting for 60M+ global clients.
- Automated the trade-date reconciliation workflow between front-office systems using SQL, Python, and Excel macros, achieving 99.7% reconciliation accuracy, eliminating legacy dependencies, and saving 4 hours daily across multiple business units.

Ericsson, Gurugram, India **February 2022 – April 2022**
Intern (Data Analytics and Automated Operations)

- Analyzed network traffic trends using Python (Pandas, Matplotlib) and built visual dashboards in Grafana to uncover patterns in latency and packet loss, supporting an 8% improvement in global performance metrics
- Leveraged Apache Spark on distributed traffic logs (~1.5 TB/day) for near real-time anomaly detection and fault prediction, enabling faster capacity planning and reducing incident response time by 25%.

Evalueserve, Gurugram, India **June 2021 – August 2021**
Intern, Business Analytics Division

- Executed a customer segmentation project for an emerging small finance bank, analyzing 2M+ transaction and demographic records using regression analysis, K-means clustering, and SQL, uncovering behavioral patterns that increased cross-sell campaign ROI by 15%.
- Converted model insights into actionable marketing strategies by identifying clusters of customers with high credit utilization and recurring deposit activity, partnering with retail analytics and marketing teams to refine targeted outreach efforts, improving lead conversion by 12% and reducing acquisition costs by 9%

PROJECTS

Sentiment Analysis on Financial Articles (Undergrad Minor Project) **January 2022 – May 2022**

- Developed an NLP pipeline using Python (NLTK, scikit-learn) with preprocessing steps (tokenization, lemmatization, TF-IDF embeddings) and machine learning models (SVM, Logistic Regression) to analyze financial news, achieving 87% accuracy in predicting market sentiment trends and improving stock forecasting reliability by 14%.

Sneakeronomics (Independent Data Analytics Project)

- Initiated as a profit-driven sneaker reselling venture, evolved into a data analytics project using scraped StockX data. Applied XGBoost and regression models to examine appreciation and depreciation trends, revealing how collaborations with influential figures and major brands impact resale values. Utilized Python (Pandas, NumPy, Scikit-learn) for feature engineering and data visualization.

Airfare Price Analysis (Rady School of Management UCSD) **September 2025**

- Built a comprehensive analysis and predictive model of Airfare pricing using travel patterns and over 20 operation metrics to predict pricing of Airfare using data of over 10 US Airlines and achieving accuracy of 95%.
