DEVANSH SACHAR

San Diego, CA | (858) 214-5153 | devanshsachar47@gmail.com | linkedin.com/in/devansh-sachar-081539198

SUMMARY

UCSD Master's graduate bridging AI, data and business to solve real-world problems, with experience across telecom, banking and supply chain. Skilled in SQL, Python and statistical visualization, driving business intelligence through quantitative research.

EXPERIENCE

Business Analyst (Capstone Project), Thermo Fisher Scientific, San Diego, CA **Mar 2026 - Jun 2026**

- Diagnosed a 19.1% On-Time-to-Promise (OTTP) miss rate across 2M orders using SQL and statistical analysis, isolating risk in Business Unit UG (47.6%) and factor combinations at 5.2x baseline risk.
- Built a Random Forest early-warning model and daily watchlist dashboard flagging high-risk orders at 59.3% precision; each 1% fewer late orders saves an estimated ~$112M revenue and ~$4.4M shipping.
- Rebuilt a customer-experience risk score by consolidating 17 SQL KPIs into 6 risk indexes with SHAP explainability, lifting correlation with customer satisfaction from +0.024 to +0.428 and cutting false alarms from ~30% to ~12%.

Data Analyst, Bank of America, Gurugram, India **Aug 2022 - Apr 2025**

- Automated data cleansing, validation, and predictive modelling in Alteryx (Intelligence Suite), Python, and SQL, saving 3+ hours daily for 7 departments and 250+ employees through workflow automation.
- Implemented Informatica cloud ETL pipelines and Google Cloud (GCP) solutions, cutting data latency by 60% and enabling near real-time KPI reporting for 60M+ global clients.
- Developed predictive models (logistic regression, neural networks) and LLM-enabled analytics on 10M+ records, cutting manual analysis effort by 40% and workflow time from days to hours.
- Handled stakeholder management across 7 departments in an Agile environment (Jira) to gather requirements, build data quality and validation checks, and promote workflows with CI/CD release management.
- Wrote optimized SQL and stored procedures to automate recurring reporting, and applied statistical analysis (ROI and incrementality) to measure the financial impact of programs and campaigns.
- Leveraged LUMI to source, validate and analyze large-scale enterprise datasets, applying data quality checks and attention to data sensitivity to deliver reliable dashboards and insights for business stakeholders.

Intern, Ericsson, Gurugram, India **Feb 2022 - Apr 2022**

- Built Grafana dashboards and Python (Matplotlib) data visualizations to monitor network KPIs and spot latency and packet-loss patterns, supporting an 8% improvement in global performance metrics.
- Applied Apache Spark to ~1.5 TB/day of distributed traffic logs for near-real-time anomaly detection and fault prediction, reducing incident response time by 25%.

Intern, Business Analytics Division, Evalueserve, Gurugram, India **Jun 2021 - Aug 2021**

- Performed customer segmentation on 2M+ bank customer records using SQL, regression, and K-means clustering, increasing cross-sell campaign ROI by 15% and lead conversion by 12%.

PROJECTS

AI-Driven Stock Price Forecasting Pipeline | Python, SQL, Snowflake, NLP **Oct 2026**

- Built a Snowflake pipeline in SQL and Python to process 1.2M stock records and 86,400 news articles, generating AI sentiment scores and technical indicators for price forecasting.
- Improved directional accuracy from 61.8% to 72.4% versus a price-only model, reduced mean absolute error by 17.3%, and automated 68% of manual data preparation.

Financial and Weather Impact Data Integration Framework | Python, Snowflake, PostgreSQL **Aug 2025**

- Integrated National Oceanic and Atmospheric Administration (NOAA) weather data with sales records to quantify weather-driven demand, identifying seasonal patterns that shifted revenue by up to 12%.
- Engineered a scalable Python and Snowflake ETL (Extract, Transform, Load) pipeline, reducing manual data handling by 70%.

EDUCATION

Master of Science in Business Analytics, UC San Diego (Rady School of Management) **Jul 2025 - Dec 2026**

- Relevant Coursework: SQL and ETL, Customer Analytics using AI, Pricing Analytics, Python Programming
- Teaching Assistant: Real Estate Finance and Development

Bachelor of Engineering in Computer and Communication Engineering, Manipal University Jaipur, India **Jul 2018 - Jul 2022**

SKILLS

Technical Tools: Python, SQL, PostgreSQL, VBA, Excel, Power Query, Tableau, Power BI, Looker, Grafana, Alteryx, Jira, Dashboards, KPI Reporting, Data Visualization

Analytics and Machine Learning: EDA, Statistical Analysis, Hypothesis Testing, A/B Testing, Predictive Modelling, Random Forest, Gradient Boosting (XGBoost), SHAP, Time-Series Forecasting, Anomaly Detection, K-Means Segmentation, Feature Engineering, NLP, LLM-Enabled Analytics

Data Engineering and Business: ETL/ELT Pipelines, CI/CD Pipelines, Release Management, Snowflake, dbt, Apache Airflow, Azure Databricks, Apache Spark, PySpark, Google Cloud (GCP), Informatica, Data Quality and Validation, Process Improvement, Workflow Automation, Stakeholder Management, Agile
